

Help - Scratches on cylinders?

Posted by Omn3d0n - 16 Mar 2009 03:54

Hi,

So we taken apart the motor and found some scratches

on the cylinders. What can I do?

Help

Sid

depends what they look like. Lines are not scratches. Lines are pretty common. Scratches are things you can catch a finger nail on. These may or may not be usable. It all depends.

If they are too bad the block is junk.

Hi,

I am in Milwaukee. The car is an 83. Anywhere close with
a 1 or two hours would be great.

Thanks

Sid

I a still not convinced the block you have is bad.

Sid,

Pictures would be helpful - need to know if they are real scratches, of just little abrasions. I've got some resources for you. I know Nick has a couple of complete motors, Ray & I have one, and "A Part Above" has blocks in the Ohio (they're new sponsor as well, details coming).

Keep us posted!
