

Gauge wiring

Posted by rd7839 - 16 Dec 2011 12:27

I've got my car torn apart for some winter dieting and was thinking about building a new dash since my cut down stock one with gauges weighs 25lbs. I don't however want to get into a complete rewire job so I am wondering if I can use the factory wiring and sending units to go with inexpensive aftermarket gauges and what brands do you guys recommend?

Seafeye, Would you have any diagrams or photos of your setup? I am trying to get as much reference material as possible before I start building the new wiring.

Thanks much!

Rich
