

Lexan windshield

Posted by rd7839 - 17 Jan 2012 14:56

I got my used NASCAR windshields in the mail the other day and have a mouning question. When we took out the glass windshield we destroyed the moulding piece that mounts between the frame and the glass that spaces the windshield out about 3/4". The new windshield doesn't fit flush to the frame and looks terrible! I'm thinking about cutting strips of wood to take up the space but was wondering if anybody has a better idea?

It's kinda cool thinking Jeff Gordon looked through the same windshield at Talladega at 220mph! Maybe it will make drive like him now!
