

Lightweight battery options

Posted by RAN - 19 Sep 2012 09:15

About 3 years ago a string of comments were written in response to "Advice for battery upgrade" which included recommendation of lawn tractor batteries as a low cost, workable alternative to race batteries. Any long term experience and/or specific recommendations on this now?

The original comment string contained recommendation for 275 cold cranking amps or greater and 350 cranking amps.
