

Advice for battery upgrade

Posted by Gary_44 - 12 Jul 2009 10:51

Well, it's battery time, got a few questions for those who've been there, done that with the lightweight units.

- Any suggestions for upgrading to a lightweight battery? I've seen that some folks went back to full size, is the lightweight too unreliable?

- Any brand to avoid? Odysee, Kinetic, Braille, etc..

- Suggested vendors?

- What minimum size/ampereage can I get away with? I'm sure the factory 800CCA is overkill.

Any other pros/cons?

This car is still street driven, nice California climate.

Thanks.
