

Air Circulation

Posted by jacksonrw - 15 Jun 2010 09:49

ok its houston - got it

ok its the summer - got it

but my 944/951 buds need some relief and airflow in the cockpits

any ideas?

Don't drill holes in the body. You don't need to as there are some holes there when you remove the license plate lights.

Either way don't do it.

A 1 in. hole wont help remove the fuel fumes. Eliminate the fuel leak source.

The car in motion will take care of the stagnant ambient hot air.

Convert to outside hold downs for the hatch, knock out the key tumbler to get legal 1" hole + exist holes behind license plate = some venting.

yeah i see the tiny license plate holes. not doing much.

hmm well was worth a shot. Was 5 of us here looking at what to do.
