### NEW CAR BUILD

Posted by RacerX - 16 Dec 2010 14:40

A brief history about myself. My name is Ken Frey I live about 60 mi. SW of Chicago in the Midwest region. I've been in TT for the last 4 yrs. and decided to get into W2W. It was hard to pick a group but finally decided to go with the 944 Spec. I purchased my car in Jan 09 with intent on getting it finished in time for the 2009 season. A 85 1/2 944. That never happened because of an addiction to my 04 GTO. Trying to run in TT and build a car at the same time doesn't work well. Well the GTO is gone now, sold....RIP, memories are fond but it's time to move on. (sniff sniff, tears welling up)

The build started in Feb 09 but stalled for reasons stated above but began again in earnest a few months ago. I will also try to share the cost with you as we progress. Lets hop in the time machine and go back to Feb 09.............. I purchased the car for \$850 and begain to strip it. I set up an Ebay account and started selling the parts. After selling fees I've netted \$663.21 from the sale of parts, SO FAR. I still have some to sell but wanted to finish the build before I get rid of the rest of the parts. I have \$186.79 in the car.

We had a motor removal party in Feb 21 2009

passenger seat 20

MORE TO COME
Re: NEW CAR BUILD Posted by RacerX - 06 Apr 2011 17:23
I weight 230 with street clothes. I still have to add, my gear, fire system, nets, exhaust system, cooling suit, passenger seat and belts. The fuel tank was close to being empty. That leaves me 120 lbs for all the stuff I have to add. I'd like to come in just a tick over 2600 lbs with very little fuel. Isn't that the way its suppose to be done?

Ok what stuff do you need to add? 120lbs is alot of stuff. personal gear should be 10lbs at most. Fire system 10lbs and nets 2 lbs. Passeners seat heck alot of cars don't run them and cool suit usally puts cars over the 2600lbs min. I try to shoot for 2600lbs min on zero fuel no cool suit. I rarely run the cool suit during qualfying and we must make weight after qualifying. Also it is possible to run out of gas during a race and then be weighted and DQ'ed.
In any event I see 30lbs of gear not including pass seat. Not sure what you maean by exhaust though.

I instruct so I'd like to be able to take students out and another benifet is that if I'm having trouble, someone can take me out. The wife and kids like to go out once in a while too.

#### 944-SPEC - 944SPEC - low cost wheel to wheel racing

I might have to add ballast in the first few races till I get all the stuff in or run a full tank of fuel. What do the plastic tanks hold, something like 21 gallons?
